

Dear Computer Science Teachers,

My name is Connor Petri, I'm a third-year Computer Science student at San Jose State, and I am reaching out on behalf of the San Jose State University Department of Computer Science. We would like to offer a list of a few opportunities which you or your students may be interested in, and we'd like to invite you and your students to explore our university to learn of the many benefits of the undergraduate programs we offer here at San Jose State. One of the benefits of our university is that we are the top public university in the west for best value according to recent rankings. Likewise, our faculty provide a world-class education to students while keeping costs down. Moreover, we provide a variety of financial aid, grants, and scholarship opportunities that can help further ease the cost of tuition.

Furthermore, I would like to highlight just a few of the advantages of pursuing an undergraduate computer science degree at San Jose State University. To start, our students have access to a wide variety of courses, clubs, and events. Another key benefit of our program is the events we hold often, which provide potential career opportunities and connections with real-world employees and organizations within the tech industry. One such event was the recently hosted Nvidia GTC, which provided students an opportunity to attend an industry event and network with Nvidia employees. In addition, our curriculum includes a wide variety of specializations, including but not limited to artificial intelligence, data science, cyber security, and game design. On top of that, we have a number of clubs, workshops, and networking opportunities where students can get hands-on engineering experience, build a sense of community, and gain valuable connections within the field. Some of these clubs include, but are not limited to:

- **Girls Who Code:** A club dedicated to fostering a supportive network for women in tech.
- **Responsible Coding Club:** Students work to make responsible computing relevant to everyone from all fields.

- **Game Development Club:** Students learn how to design and develop video games and collaborate with others.
- **AI & ML Club:** A community of machine learning enthusiasts who research and build projects related to AI
- **Spartan Racing Formula SAE:** Students collaborate in a cross-disciplinary engineering environment to build and race a formula-style car.

In addition to our clubs, faculty members are constantly conducting research into various niches of the field, including graph theory, deep learning, and big data. Students often assist faculty with research, giving them hands on experience and granting them the opportunity to be published in an academic journal. These opportunities set students up for success, with our alumni getting jobs all over the Silicon Valley and beyond. Companies such as Adobe, Nvidia, AMD, OpenAI, Google, Meta, and Amazon all seek out San Jose State graduates by tabling at our career fairs. These events grant students the opportunity to speak with recruiters directly and network with major companies in many different industries.

So, what can you do to help your students on their journey to college with San Jose State University? First, I would like to extend an invitation to you and your student to attend our open house next Friday, April 3, 2026. We will be offering tours of the campus and have members of the faculty present for you to chat with. This is an excellent opportunity to get to know the campus and for each student to determine if San Jose State University is right for them. Additionally, you can share the link to the CSU application website with your students, where students can apply to San Jose State, as well as every other CSU in the state of California.

Thank you for your time, and happy coding!

Connor Petri - SJSU Department of Computer Science

I used a very optimistic and active tone with the intention of persuading the email's recipient to advertise our program to their students. I tried to use the active voice and engaging transition words to prevent losing the attention of the reader. At many points during this assignment, I thought that 700 words was far too many for a marketing email. I would not read an email this long that was essentially an advertisement, so keeping the reader engaged is really important given the 700 word +/-10% requirement. I emphasized the instruction quality, community, clubs, events, and other opportunities students have to develop themselves professionally. I did this because the academics behind computer science will not get you a job out of college alone, you need to have some practical experience under your belt. This is why I spent so much time highlighting the clubs. The work you do for different clubs will be what makes you stand out from other applicants in a market that is as over saturated as software development is. I also emphasized the research opportunities students have, as many want to pursue a graduate degree in computer science. I made up a hypothetical outreach event, which is probably the most effective way of convincing a teacher to disseminate information. If they feel like their students will significantly miss out on something, they usually will at least mention it in class. The main objection I addressed was that of cost. I highlighted San Jose State's many options for financial aid, grants, and scholarships as well as its relatively low cost compared to other colleges of the same caliber.
